

Guidelines evaluation sheet BaselHack 2017

The jury will evaluate each hacking project during the final presentations on Sunday Oct-29 2017. The awards are given to the **three BaselHacks** which correspond best to the following four criteria:

- 1) Significance of the problem addressed, the market potential and what is the value added by the team? Does it solve a real problem?
- 2) How innovative is the proposed solution? Is it a new and creative solution? Is there any evidence of collaborative development during the hackathon from the initial pitch to the final presentation?
- 3) Feasibility of the proposed solution (technical, societal, ...)? Is it realistic to build a product based on the prototype?
- 4) Was the presentation clear, cool, inspiring and in the entire spirit of the Hackathon?

Details on the scoring procedure:

Each member of the jury evaluates each project, with a separate score for each of the four criteria on a scale from 1(min) to 10 (max). The overall scores of all projects are calculated by the BaselHack jury after the presentation.

In case of equal top ranking scores, the jury members will decide with the help of members of the organization committee about the winning projects.
